## PROFESSIONAL SUMMARY

Manager with years of experience leading large-scale AI and LLM evaluation programs. Proven track record managing 100+ cross-functional contributors across distributed global teams, operationalizing RLHF pipelines, benchmark frameworks, and enterprise AI delivery systems. Specialized in transforming experimental AI systems into structured, measurable, and production-ready workflows.

## CORE COMPETENCIES

AI Program Management | LLM Evaluation & Benchmarking | RLHF & Reward Modeling | Human-in-the-Loop Systems | Cross-Functional Team Leadership | AI Quality Metrics & Regression Analysis | Enterprise AI Governance | Cloud & Containerized Infrastructure | Delivery Operations & SLA Management

## PROFESSIONAL EXPERIENCE

### Turing - Delivery Engineering Manager

Jun 2024 - Present | United States (Remote)

- Designed and implemented structured benchmarking frameworks, including multi-turn agent evaluations and 3x replication validation strategies.
- Operationalized RLHF pipelines and reward modeling workflows to improve model reliability and regression detection.
- Developed AHT forecasting models and performance dashboards to optimize throughput while maintaining strict quality thresholds.
- Managed time-and-material engagements with SLA alignment, delivery tracking, and cross-stakeholder communication.
- Established root-cause analysis systems to detect hallucinations, quality drift, and benchmark overfitting.
- Led crisis-delivery initiatives under compressed timelines, ensuring on-time milestone completion without quality degradation.

### GCOM Information Technology Inc. Software Engineer – LLM Training

Aug 2023 – Jun 2024 | United States (Remote)

Worked on large-scale data generation workflows used to train and improve large language models through structured code reasoning and evaluation tasks.

Turing served as the primary client for this engagement.

- Developed structured datasets for training large language models in programming and reasoning tasks.
- Designed prompt structures and evaluation frameworks for assessing model output quality.
- Contributed to large-scale human-in-the-loop training workflows used to improve model performance.
- Participated in quality assurance processes to verify dataset correctness and consistency.
- Collaborated with distributed teams to ensure delivery of high-quality training data for frontier AI models.

## HTC Global Services - Senior Software Development Engineer

Feb 2017 – Jul 2021 | Chennai, India

Worked on enterprise-scale tax and financial systems supporting large government and corporate reporting systems.

- Built and maintained backend services for large-scale tax applications processing millions of records stored in DB2 databases.
- Developed enterprise applications using Java Spring Boot, JPA, COBOL, PL/I, and IBM mainframe systems.
- Designed automation scripts in Python to reduce manual operational tasks and improve reporting workflows.
- Led modernization initiatives migrating legacy mainframe workloads to AWS cloud infrastructure.
- Migrated large-scale DB2 datasets to cloud systems using AWS Database Migration Service.
- Developed full-stack monitoring dashboards using Node.js, Express, React, and PostgreSQL to visualize operational metrics.

## PROJECTS

### Hashmap - Data Structures & Algorithms Learning Platform

- Personal educational platform designed to help software engineering students prepare for technical interviews at top technology companies.
- Created structured explanations and walkthroughs for 90+ critical data structures and algorithm problems.
- Produced over 75 hours of instructional video content covering algorithmic problem-solving strategies.
- Designed learning pathways that break down complex interview problems into intuitive conceptual frameworks.

## TECHNICAL SKILLS

**Languages:** Python, JavaScript/TypeScript, Java

**LLM Systems:** RLHF, Reward Modeling, Benchmark Evaluation, Agent-Based Workflows

**Infrastructure:** Docker, Cloud VMs

**Tools:** GitHub, LiteLLM Proxy, Performance Dashboards, Google Sheets Automation

## EDUCATION

**Master of Science in Computer Science**

Aug 2021 - May 2023

*Stevens Institute of Technology*
